Details

Coverage can be downloaded to a Navionics+ or Navionics+ Updates card.

Plug your Navionics card into your computer and launch the Chart Installer program.

For blank, user-selectable cards:

- 1. Use the selection box with the four pins on the map screen to select an area to download
 - If you have already downloaded coverage to the card, the UPDATE tab will be highlighted
 - To display the selection box and add a new area, select the DOWNLOAD tab

- You will notice a highlighted box that is brighter than the rest of the map This is your selection box and it is usually located in your general geographic area
- 3. Click on a corner of this box and drag it over to your desired area Zoom the map in to your desired lake/river/coastal area

Note: You may have to adjust the coverage box – then zoom the map in or out – readjust the coverage box – zoom in or out some more to select your desired coverage

- 4. Select the compatible chart layers you want to download from the left column
- 5. Readjust the coverage box and hit "Start"

Navionics+ preloaded cards include Nautical Chart and SonarChart[™] files loaded on the card when purchased

- This will contain several GB of data, which will take a significant amount of time to update
- Community Edits (for compatible plotters) can be downloaded to the card at this time

For Navionics+ US & Canada cards - Your card contains the entire coverage of Nautical Chart

1. Update Nautical Chart by checking the layer on the left download column and pressing the Start button

- 2. To download an area of SonarChart[™] and/or Community Edits:
 - Select the area by using the selection box
 - Select the check boxes by the chart layers you want to download
 - Select the Start button
